

Cranberry Nutrasorb®

Product Information

Food & Supplement Applications

PREBIOTIC - ANTI-MICROBIAL - METABOLIC AND CARDIOVASCULAR HEALTH
ANTI-INFLAMMATORY - ANTI-OXIDANT

Cranberry Nutrasorb® is a multifunctional food ingredient with enhanced anti-oxidant, prebiotic and anti-microbial properties, made by naturally coating protein particles with cranberry polyphenols. It can be incorporated into a variety of foods, dietary supplements, and cosmetic products. Cranberries contain high levels of anthocyanins and other antioxidant polyphenols that benefit human health by increasing resilience to urinary tract infection, diabetes, obesity, and cardiovascular diseases while decreasing inflammation and cellular aging. Recent data indicate that the health benefits of dietary polyphenols are mediated through dramatic, positive changes in gut microbiome, and that these changes are amplified by Nutrasorb technology. In contrast to conventional extracts, proprietary polyphenol-protein complexes developed by Nutrasorb, protect and stabilize polyphenol molecules during manufacturing and inside the body, therefore greatly increasing their potency, reducing the effective dose and providing significant taste masking.

Nutrasorb LLC develops and markets a broad range of proprietary, functionally-enhanced and standardized ingredients with naturally concentrated, stabilized, and bioavailable phytoactives from fruits and vegetables produced with innovative and proprietary Nutrasorb technology. Our ingredients are developed by researchers from major US universities and are scientifically validated and quality controlled.
