

Ginger Nutrasorb®

Product Information

Cosmetic Applications – Patent Pending

ANTI-INFLAMMATORY - ANTI-AGING - SOOTHING AND HEALING - HAIR GROWTH - ANTIOXIDANT

Ginger Nutrasorb® is a multifunctional cosmetic ingredient made by naturally coating protein particles with bioactive compounds from ginger. This process enhances beneficial properties of ginger bioactives and enables easy blending in anhydrous skin care, body care and lip care products. Ginger contains high levels of gingerols and shogaols, powerful anti-inflammatory compounds that suppress production of cytokines and chemokines in living cells thus accelerating skin repair, preventing aging and having soothing and rejuvenating effects. Anti-inflammatory and anti-microbial effects of ginger also reduce skin rashes and acnes and improve skin tone. Nutrasorb process protects and stabilizes ginger bioactives during manufacturing and inside human body, therefore greatly increasing their bioavailability and potency, reducing the effective dose and providing significant taste masking.

Nutrasorb LLC develops and markets a broad range of proprietary, functionally-enhanced and standardized food ingredients with naturally concentrated, stabilized, and bioavailable phytoactives from fruits and vegetables produced with innovative and proprietary Nutrasorb technology. Our ingredients are developed by researchers from major US universities and are scientifically validated and quality controlled.
