

Ginger Nutrasorb®

Product Information

Food & Supplement Applications – Patent Pending

GASTROINTESTINAL HEALTH - RELIEF OF NAUSEA -
ANTI-INFLAMMATORY - CARDIOVASCULAR, METABOLIC AND JOINT HEALTH

Ginger Nutrasorb® is a multifunctional ingredient with enhanced benefits for gastrointestinal and cardiovascular health made by naturally coating protein particles with bioactive compounds from ginger. It can be incorporated into a variety of foods, dietary supplements, and cosmetic products. Ginger contains high levels of gingerols and shogaols, powerful anti-inflammatory compounds that promote gastrointestinal and cardiovascular health. Anti-inflammatory effects of ginger also enhance resilience of bones and joints to aging and stress. In addition, ginger is extensively used to prevent nausea associated with motion sickness, pregnancy and gastrointestinal disorders. Nutrasorb process protects and stabilizes ginger bioactives during manufacturing and inside human body, therefore greatly increasing their bioavailability and potency, reducing the effective dose and providing significant taste masking.

Nutrasorb LLC develops and markets a broad range of proprietary, functionally-enhanced and standardized food ingredients with naturally concentrated, stabilized, and bioavailable phytoactives from fruits and vegetables produced with innovative and proprietary Nutrasorb technology. Our ingredients are developed by researchers from major US universities and are scientifically validated and quality controlled.
