

Nutringa™

Product Information

Cosmetic Applications – Patent Pending

nutrasorb®

AN ADVANCED GENERATION OF NATURE-POWERED PRODUCTS

REJUVENATING - ANTI-INFLAMMATORY - ANTI-AGING - ANTI-OXIDANT - CHEMOPROTECTION

**Nutringa™** produced from edible seeds or leaves of *Moringa oleifera*, called “Miracle Tree”, is one of the most powerful skin rejuvenating botanicals. It works via activating the skin’s own defenses against aging, DNA damage, wrinkles and loss of firmness. Nutringa also contains polyphenolic antioxidants that directly inactivate free radical species in human cells. It is highly stable, water soluble and compatible with most formulations. Strong anti-inflammatory and chemoprotective properties as well as direct and indirect antioxidant activities quickly restore compromised skin barrier justifying uses such as:

- Anti-aging products
- Sunscreens and after sun
- After shaving
- Post cosmetic or skin procedures
- After peel

Nutrasorb’s proprietary process enhances the formation of large quantities of powerful moringa bioactives including four unique moringa isothiocyanates (MICs). MICs are highly stable structural and functional analogues of sulforaphane, the well-studied but unstable isothiocyanate from broccoli. MICs have strong anti-inflammatory and cytoprotective activities mediated through powerful induction of the cells’ own defense mechanisms against damage caused by radiation, aging, pathogens and pollutants.

Nutrasorb LLC develops and markets a broad range of proprietary, functionally-enhanced and standardized ingredients with naturally concentrated, functionally-enhanced, stabilized, and bioavailable phytoactives from fruits and vegetables produced with innovative and proprietary Nutrasorb technology. Our ingredients are developed by researchers from major US universities and are scientifically validated and quality controlled.
