

Quinoa Milk™

Product Information

Food & Supplement Applications

ENDURANCE - MUSCLE BUILDING - ANTI-OXIDANT - CARBOHYDRATE METABOLISM

Quinoa Milk™ is produced from seeds of quinoa (*Chenopodium quinoa*), a highly nutritious and stress tolerant crop of the Amaranthaceae family. Quinoa is traditionally used to enhance stamina and physical performance. Its bioactive constituents, phytoecdysteroids (mainly 20-hydroxyecdysone) strongly enhance synthesis of many proteins in cells, including muscle, and induce stress resistance while showing no hormonal effects or binding to steroid receptors. We developed a proprietary method for naturally leaching these bioactive compounds from intact quinoa seeds producing a unique, proprietary Quinoa Milk, which concentrates and combines muscle protein synthesis enhancing effects of quinoa phytoecdysteroids with anti-aging, anti-inflammatory and anti-oxidant effects of quinoa polyphenols.

Nutrasorb LLC develops and markets a broad range of proprietary, functionally-enhanced and standardized ingredients with naturally concentrated, stabilized, and bioavailable phytoactives from fruits and vegetables produced with innovative and proprietary Nutrasorb technology. Our ingredients are developed by researchers from major US universities and are scientifically validated and quality controlled.
